

# SysTrack Report Center

The Visibility IT Needs to Make People Happy

## Challenge

Busy IT executives want reporting to be quick and easy. SysTrack Report Center provides a single location for accessing all of your SysTrack reports.

## Benefits

- Streamlines generation and download of SysTrack reports

## Features

- Centrally located report library
- Access to reports generated with Microsoft SQL Server Reporting Services (SSRS)
- Web-based interface
- Customizable reports
- Easily run multiple reports against the same set of data

## Easily run and access customized SysTrack reports

SysTrack Report Center generates SysTrack reports containing custom content according to user specifications, then streamlines the download of individual or multiple reports in Word or PDF format. To accomplish this, SysTrack Report Center provides access to a central library of reports that presents the latest data collected and collated through SysTrack products. The ability to input user specifications allows for content customization and filtering based on the same set of data.

The reports available in SysTrack Report Center are a collection of pre-defined SysTrack reports that cover user, application and system behavior; automated reports that are produced from SysTrack Transform and SysTrack Image Planner; and custom reports imported via SysTrack Kits.

Some reports are categorized by the SysTrack tool used to generate the data. For example, Image Planner reports have been created by SysTrack Image Planner and contain a detailed breakout of software packages assigned to each image within a model.

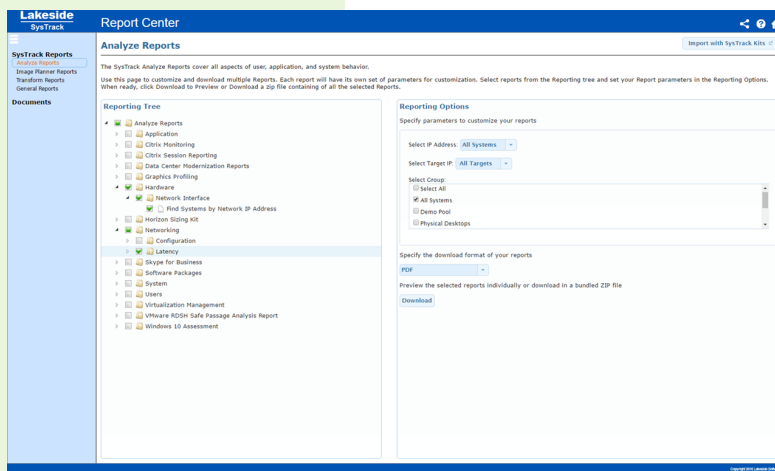

## SSRS integration

The reports included in SysTrack Report Center are created using SQL Server Reporting Services (SSRS). Reports built with SSRS allow for customized content and filtering using parameters.

For example, SysTrack Image Planner reports are unique to the model selected for analysis, and this model selection is a parameter within the Image Planner reports.

## Documents

SysTrack Report Center can also provide access to site-specific Word, Excel, or PDF files included in the Report Center library. Similar to reports, SysTrack Report Center provides the ability to select and download multiple files that are stored in the Documents folder on the Report Center web server.
